Car-Rep 2K Headlight Clear features Wise 2K® Technology, combining a polyurethane clear coat with a built-in hardener for an ultra-strong, durable finish. The formula includes adhesion-promoting agents, allowing direct application to headlights. This advanced coating is chip-resistant, UV-resistant, and restores yellowed or cloudy polycarbonate headlights—improving both clarity and visibility. With an innovative unlimited pot life, there's no need for mixing or activation—simply use the entire can without worrying about premature hardening. The easy-to-apply formula offers long-lasting protection against scratches, chemicals, and environmental damage.

SURFACE PREP: Clean headlights and surrounding area. Sand with 400 grit, then 600–800 grit. Wipe clean with Car-Rep Degreaser and lint-free cloth.

APPLICATION: Shake can well. Spray 15–25 cm from surface in smooth, overlapping strokes. Apply 3 light coats, finishing with a wet coat. Ideal temp: 18–25 °C. Wait 5 min between coats. Clear nozzle after use.

DRY TIME: Touch dry in 30–60 min. Handle after 16 h. Fully cured in 14 days (indoors recommended).

CLEAN UP: Use general-purpose Car-rep thinner.
